

Allahverdi Akhundov

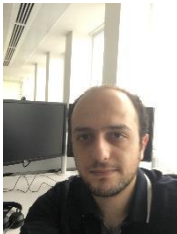

*As an HSE (Health, Safety, and Environmental) Engineer, I have gained a wealth of experience in ensuring the safety and well-being of individuals, communities, and the environment. My passion for this field stems from my desire to make a positive impact in the world, and my education in the field of Disaster Management and Environmental Impact and training have equipped me with the skills and knowledge necessary to do so. During my time as a student at IMT Mines Ales, I had the opportunity to work on various projects, simulations, and initiatives related to Crisis, emergency, and risk management. This provided me with hands-on experience in upgrading the existing Crisis management system at my company, also conducting risk assessments, running safety audits, developing and implementing safety*

*programs, investigating incidents and accidents, and so on. Through my efforts, I have helped to improve the safety culture and environmental responsibility within the company, and I have seen a significant reduction in accidents and injuries.*

*I am now eager to continue my professional development and make a meaningful contribution to the industry. I believe that my education, experience, and passion for this field make me a strong candidate for opportunities, and I am confident that I will continue to make a positive impact in this field for years to come."*

Salim Salloum

*"As a Production and Architecture Consultant at Murex, my job is to find solutions to problems faced by users of the Murex platform as well as improve its Architecture. Once a solution to a problem is found, it then becomes my job to explain it to the client and to accompany them with implementation and testing. In addition, I will eventually be consulted on Production matters of business continuity and disaster recovery planning".*

*« I'm Livia Paraguassú, I have just graduated in Disaster Management and Environmental Impact at IMT Mines Alès. After my internship, I had the opportunity to continue working for the same company in France.*

*Currently, I am in charge of greenhouse gas emissions calculations and the definition of decarbonization strategies aiming to reduce the emissions related to Casino Group's activities in France and South America.*

*It is a gorgeous opportunity to apply the knowledge learned during my master, especially in line with environmental impact assessment »*
